

CUSTOM GRADE CALCULATIONS – HS AND MS ONLY at ECC

Teachers can define their own calculation in the instructor suite under the wizard hat and wand.

1. Select Custom Calculations
2. Name the Custom Calculation
3. Click Save & Edit (This will make the bottom of the screen active)
4. Select the quarter/semesters and enter in the desired calculation.
5. If the teacher is using weighted points then that tab must be selected.
6. The assignments that are to be weighted must be selected to appear in the formula.

Be sure that when you are defining your custom calculations and weighting your assignments you must only use those assignment types during the quarter for your grades to average correctly.

For example – if I choose to create 20% Homework, 10% Participation and 70% Unit Tests for my quarterly weightings; I can only select those assignment types during the quarter – I cannot choose to grade a Lab and expect that to calculate correctly.

If you have any questions contact Chris Crites.
